### On The Grounds

#### SLASH PINES (PINUS ELLIOTTII)

The Slash Pine Tree is a hardy native conifer that creates a natural bird sanctuary. These trees that grow as tall as 80 feet shelter birds from predators, with owls, woodpeckers, eagles and egrets all making their homes amid the branches. With luxurious long soft needles, these shade trees provide more open foliage than a broadleaf tree, so light can filter down to nearby plants making it ideal for many shrubs and groundcovers. The Slash Pine is happy in low hammocks, sloughs, along streams and in preserve areas where its Pine seeds are a great food source for squirrels and other animals.
